

SUMMARY:-

Role : Executive – EHS
Experience : 4-5 years.
Education : B.E. / DE / MIHS / + PDIS (Post Diploma in Industrial Safety)
Industry type : Pharmaceuticals / Manufacturing unit
Functional Area : Environment, Health & Safety and Regulatory affairs
Age : 35 – 40 years.

DESIRED CANDIDATE PROFILE:-

- Minimum 4 yrs EHS experience in a pharmaceutical / any process manufacturing environment.
- Should possess EHS / ISO -14001 / OSHA – 18000 auditor's certification.
- Organization, planning, Training and communications skills.
- Knowledge of Environmental and Safety regulations.

JOB DESCRIPTION:-

- Ensure EHS compliance at the company's primary research and development facility, and drive EHS integration into the product development 'stage-gate' process.
- Provide support and technical assistance in the administration of and compliance with regulatory and company EHS requirements. Support facilities in implementing and sustaining EHS programs and procedures by ensuring resources, tools and knowledge are available.
- Perform product design reviews for regulatory compliance, sustainability, life cycle assessment and environmental impacts. Build capacity and tools to incorporate "life cycle assessment" principles into product design and development.
- Guide and promote employee safety performance by developing safety systems, policies and procedures, safety campaigns, and programs to eliminate or prevent injurious hazards and behaviors. Create a safety culture at the business unit level.
- Develop, integrate and execute EHS policies, programs, procedures, and training across assigned facilities to ensure regulatory and permit compliance.
- Ensure that accidents, incidents, compliance deviations and enforcement actions are fully investigated and corrective and/or preventive measures are taken. Perform incident investigation and reporting for all injuries and close calls, including root cause analysis and corrective action.
- Ensure the adequate assessment and management of EHS issues and risks arising from incidents, company products and business affairs. Inspect/assess, monitor, investigate and/or recommend corrective action; conduct trends

analysis; document compliance with standards; perform technical work, program design and implementation; accountable for outcomes of EHS issues.

- Function in a leadership role effectively providing support to entire group companies for: agency interactions, enforcement actions; permitting applications, reports, issues and negotiations; technical, engineering, and science support; assessment and control of issues arising from operational processes, equipment, or materials.
- Conduct facility assessments, inspections and audits to ensure compliance with regulatory, permit and company requirements to ensure that corrective and/or preventive measures are completed.
- Assess local and regional EHS regulations and compliance requirements and implements programs and systems to ensure compliance at the facilities located within a geographical region.
- Provide employees, facility management, and division management with technical guidance, regulatory advice, and training.
- Plan, coordinate, and conduct periodic facility audits, surveys, and inspections to identify environmental and occupational hazards, to ensure compliance with applicable regulations, and develop recommendations that provide solutions, remedies, or process alternatives.
- Interact, report and provide company representation to regulatory bodies relating to particular aspects of EHS affairs, compliance matters, enforcement actions, remedial activities and regulatory affairs. Interface with external professional services, customers, regulators, industry and represent company at public meetings, hearings, and perform public relations duties.
